Subject Index

Acetic acid (vinegar), continuous conversions of ethanol (wort) to, application of living immobilized cells to the acceleration of: hydrous titanium(IV) oxide-immobilized *Acetobacter* species, 209
Acetobacter species, hydrous titanium(IV) oxide-immobilized: application of living immobilized cells to the acceleration of the continuous conversions of ethanol (wort) to acetic acid (vinegar), 209
Acid proteases, extracellular, from *Mucor renninus*, purification and some properties of, 37
Alcohol dehydrogenase, immobilization of, by gel entrapment of cells of *Saccaromyces cerevisiae*, 223
Alginate gel, photophosphorylation in bacterial chromatophores entrapped in: improvement of the physical and biochemical properties of gel beads with barium as gel-inducing agent, 281
Amperometric determination of total assimilable sugars in fermentation broths with use of immobilized whole cells, 234
α-Amylase and glucoamylase activities produced during fermentation, measurement of, 121
Antibiotics, β-lactam, enzymatic synthesis of: a thermodynamic background, 138
Aspergillus niger, effects of various conditions on the production of citric acid during fermentation of molasses by, 61

Bacterial chromatophores entrapped in alginate gel, photophosphorylation in: improvement of the physical and biochemical properties of gel beads with barium as gel-inducing agent, 281
Barium as gel-inducing agent, photophosphorylation in bacterial chromatophores entrapped in alginate gel: improvement of the physical and biochemical properties of gel beads with, 281
Beer chill-proofing behaviour of a water-insoluble papain conjugate of hydrous titanium(IV) oxide, a study of: use of hydrous titanium(IV) oxide as a novel chill-proofing agent, 126
Benzylpenicillin, kinetics of enzymatic synthesis of, 313
Bioaffinity adsorbents, immobilized enzymes and, magnetic supports for, 2
Bioaffinity phenomena and molecular immobilization, a quick-reference literature survey of recent literature on, 66, 155, 244, 318
Biocatalysts, immobilized, direct measurement of the thickness of the unstirred diffusion layer outside, 309
Biophotolysis, bioengineering aspects of, 103
Brevibacterium flavum, immobilization of with carrageenan and its application for continuous production of L-malic acid, 30

Candida utilis in multistage culture systems with different interstage mixing, effect of dilution rate on growth characteristics of, 133
Carrageenan, immobilization of *Brevibacterium flavum* with, and its application for continuous production of L-malic acid, 30
Cassava, two-stage fermentation method for production of protein enriched feed from, 241
Cellobiose, conversion of, to glucose using immobilized β-glucosidase reactors, 112
Cellulase of *Trichoderma reesei*, shear inactivation of, 239
Cellulases: biosynthesis and applications, 91
Cellulase-producing, high, mutant strain of *Trichoderma reesei*, 59
Cellulose, enzymatic saccharification of, in membrane reactors, 206
Chill-proof beer, significant abilities of titanium(IV)-activated glass gibre paper and its papain conjugates to, 000
Chitin and chitosan, immobilization of enzymes on, 177
Cholesterol oxidase, extraction of, from *Nocardia rhodochrous*, 201
Chromatophores, bacterial, entrapped in alginate gel, photophosphorylation in: improvement of the physical and biochemical properties of gel beads with barium as gel-inducing agent, 281
Chymotrypsin, *cis*-cinnamoyl, detection of light signals by microencapsulated, 150
cis-Cinnamoyl chymotrypsin, detection of light signals by microencapsulated, 150
Citric acid, production of, during fermentation of molasses by *Aspergillus niger*, effects of various conditions on, 61
Cooxidation, microbial, of naphthalene for the production of 1,2-dihydroxy-1,2-dihydronaphthalene, 299
Culture, tube, of microorganisms, an automated recording incubator for, 194
Degradation of lignin, microbial, 11
Detection of light signals by microencapsulated *cis*-cinnamoyl chymotrypsin, 150
Diffusion layer, unstirred, direct measurement of the thickness of, outside immobilized biocatalysts, 309
1,2-Dihydroxy-1,2-dihydronaphthalene, the production of, microbial cooxidation of naphthalene for, 299

Electrode, monoamine oxidase, in freshness

testing of meat, 117
Electrode probes, enzyme, 258
Entrapment, gel, of cells of *Saccharomyces cerevisiae*, immobilization of alcohol dehydrogenase by, 223
Enzymatic saccharification of cellulose in membrane reactors, 206
Enzymatic synthesis of benzyl penicillin, kinetics of, 313
Enzymatic synthesis of β-lactam antibiotics: a thermodynamic background, 138
Enzymatic transformations of lignin: 2., 170
Enzyme electrode probes, 258
Enzyme, immobilized, membrane, ultrafiltration of raw sewage using, 145
Enzymes, immobilization of, on chitin and chitosan, 177
Enzymes, immobilized, and bioaffinity adsorbents, magnetic supports for, 2
Enzymic reaction, continuous, performance of a hollow fibre beaker device for, 295
Ethanol and other neutral products, fermentation of pentose sugars to, by microorganisms, 185
Ethanol (wort), continuous conversions of, to acetic acid (vinegar), application of living immobilized cells to the acceleration of – hydrous titanium(IV) oxide-immobilized *Acetobacter* species, 209
Extraction of cholesterol oxidase from *Nocardia rhodochrous*, 201

Feed from cassava, protein enriched, two-stage fermentation method for production of, 241
Fermentation, batch and continuous, simple recovery method and some industrial properties, non-specific β-fructofuranosidase (inulase) from *Kluyveromyces fragilis*, 45
Fermentation, industrial, controlled gas environments in, 273
Fermentation, measurement of α-amylase and glucoamylase activities produced during, 121
Fermentation, variation in the components of palm wine during, 63
Fermentation broths, amperometric determination of total assimilable sugars in, with use of immobilized whole cells, 234
Fermentation method, two-stage, for production of protein enriched feed from cassava, 241
Fermentation of molasses by *Aspergillus niger*, effects of various conditions on the production of citric acid during, 61
Fermentation of pentose sugars to ethanol and other neutral products by microorganisms, 185
Fibre, hollow, beaker device for continuous enzymic reaction, performance of, 295
Freshness testing of meat, monoamine oxidase electrode in, 117
β-Fructofuranosidase (inulase), non-specific, from *Kluyveromyces fragilis*: batch and continuous fermentation, simple recovery method and some industrial properties, 45

Gas environments, controlled, in industrial fermentation, 273
Gel entrapment of cells of *Saccharomyces cerevisiae*, immobilization of alcohol dehydrogenase by, 223
Genetic manipulation and breeding in industrial microorganisms, protoplast fusion – a tool for, 23
Glass fibre paper, titanium(IV)-activated, and its papain conjugates, significant abilities of, to chill-proof beer, 288
Glucoamylase, α-amylase and, measurement of activities produced during fermentation, 121
Glucose isomerase from *Streptomyces* spp., immobilized whole-cell, characteristics of. Studies on microbial glucose isomerase: 4., 227
β-Glucosidase, immobilized, reactors, conversion of cellobiose to glucose using, 112
Growth characteristics of *Candida utilis* in multistage culture systems with different interstage mixing, effect of dilution rate on, 133

Hollow fibre beaker device for continuous enzymic reaction, performance of, 295
Hydrous titanium(IV) oxide, use of, as a novel chill-proofing agent: a study of the beer chill-proofing behaviour of a water-insoluble papain conjugate of hydrous titanium(IV) oxide, 126

Immobilization, molecular, and bioaffinity phenomena, a quick-reference literature survey of recent literature on, 66, 155, 244, 318
Immobilization of alcohol dehydrogenase by gel entrapment of cells of *Saccharomyces cerevisiae*, 223
Immobilization of *Brevibacterium flavum* with carrageenan and its application for continuous production of L-malic acid, 30
Immobilization of enzymes on chitin and chitosan, 177
Immobilizations, enzymes and other, popular matrices for, 82
Immobilized *Acetobacter* species, – hydrous titanium(IV) oxide: application of living immobilized cells to the acceleration of the continuous conversions of ethanol (wort) to acetic acid (vinegar), 209
Immobilized biocatalysts, direct measurement of the thickness of the unstirred diffusion layer outside, 309
Immobilized cells, living, application of, to the acceleration of the continuous conversions of ethanol (wort) to acetic acid (vinegar) – hydrous titanium(IV) oxide-immobilized *Acetobacter* species, 209
Immobilized enzyme membrane, ultrafiltration of raw sewage using an, 145
Immobilized enzymes and bioaffinity adsorbents, magnetic supports for, 2
Immobilized β-glucosidase reactors, conversion of cellobiose to glucose using, 112
Immobilized whole cells, amperometric determination of total assimilable sugars in fermentation broths with use of, 234
Inactivation, shear, of cellulase of *Trichoderma reesei*, 239
Incubator, automated recording, for tube culture of microorganisms, 194
Industrial fermentation, controlled gas environments in, 273
Industrial microorganisms, protoplast fusion – a tool for genetic manipulation and breeding in, 23
Inversion of sucrose, continuous, by gel-entrapped yeast cells, 217

Kinetics of enzymatic synthesis of benzyl pencillin, 313
Kluyveromyces fragilis, non-specific β-fructofuranosidase (inulase) from: batch and continuous fermentation, simple recovery method and some industrial properties, 45

β-Lactam antibiotics, enzymatic synthesis of: a thermodynamic background, 138
Light signals, detection of, by microencapsulated *cis*-cinnamoyl chymotrypsin, 150
Lignin, enzymatic transformations of: 2., 170
Lignin, microbial degradation of, 11
Literature survey: A quick-reference literature survey of recent literature on molecular immobilization and bioaffinity phenomena, 66, 155, 244, 318

Magnetic supports for immobilized enzymes and bioaffinity adsorbents, 2
L-Malic acid, continuous production of, immobilization of *Brevibacterium flavum* with carrageenan and its application for, 30
Matrices, popular, for enzyme and other immobilizations, 82
Membrane reactors, enzymatic saccharification of cellulose in, 206
Microbial cooxidation of naphthalene for the production of 1,2-dihydroxy-1,2-dihydronaphthalene, 299
Microbial degradation of lignin, 11
Microorganisms, industrial, protoplast fusion – a tool for genetic manipulation and breeding in, 23
Microorganisms, tube culture of, an automated recording incubator for, 194
Molasses, fermentation of, by *Aspergillus niger*, effects of various conditions on the production of citric acid during, 61
Monoamine oxidase electrode in freshness testing of meat, 117
Mucor renninus, purification and some properties of the extracellular acid proteases from, 37
Multistage culture systems with different interstage mixing, effect of dilution rate on growth characteristics of *Candida utilis* in, 133
Mutant strain, high cellulase-producing, of *Trichoderma reesei*, 59

Naphthalene, microbial cooxidation of, for the production of 1,2-dihydroxy-1,2-dihydronaphthalene, 299
Nocardia rhodochrous, extraction of cholesterol oxidase from, 201

Palm wine, variation in the components of, during fermentation, 63
Papain conjugates, titanium(IV)-activated glass fibre paper and its, significant abilities of, to chill-proof beer, 288
Papain conjugate, water-insoluble, of hydrous titanium(IV) oxide, a study of the beer chill-proofing behaviour of – use of hydrous titanium(IV) oxide as a novel chill-proofing agent, 126
Patent reports, 71, 161, 249, 323
Pentose sugars, fermentation of, to ethanol and other neutral products by microorganisms, 185
Photophosphorylation in bacterial chromatophores entrapped in alginate gel: improvement of the physical and biochemical properties of gel beads with barium as gel-inducing agent, 281
Proteases, extracellular acid, from *Mucor renninus*, purification and some properties of, 37

Protein enriched feed from cassava, two-stage fermentation method for production of, 241
Protoplast fusion – a tool for genetic manipulation and breeding in industrial microorganisms, 23
Protozoa *Tetrahymena pyriformis* as single cell protein: fermentation and nutritional aspects, 54
Purification and some properties of the extracellular acid proteases from *Mucor renninus*, 37

Reactors, membrane, enzymatic saccharification of cellulose in, 206

Saccharification, enzymatic, of cellulose in membrane reactors, 206
Sewage, raw, ultrafiltration of, using an immobilized enzyme membrane, 145
Shear inactivation of cellulase of *Trichoderma reesei*, 239
Single cell protein, protozoa *Tetrahymena pyriformis* as: fermentation and nutritional aspects, 54
Streptomyces spp., characteristics of immobilized whole-cell glucose isomerase from. Studies on microbial glucose isomerase: 4., 227
Sucrose, continuous inversion of, by gel-entrapped yeast cells, 217
Sugars, pentose, fermentation of, to ethanol and other neutral products by micro-organisms, 185
Sugars, total assimilable, amperometric determination of, in fermentation broths with use of immobilized whole cells, 234
Sulphydryl oxidase – properties and applications, 265
Supports, magnetic, for immobilized enzymes and bioaffinity adsorbents, 2
Synthesis, enzymatic, of benzyl penicillin, kinetics of, 313
Synthesis, enzymatic, of β-lactam antibiotics: a thermodynamic background, 138

Tetrahymena pyriformis, protozoa, as single cell protein: fermentation and nutrional aspects, 54
Titanium(IV)-activated glass fibre paper and its papain conjugates, significant abilities of, to chill-proof beer, 288
Titanium(IV) oxide, hydrous, use of, as a novel chill proofing agent: a study of the beer chill-proofing behaviour of a water-insoluble papain conjugate of hydrous titanium(IV) oxide, 126
Titanium(IV) oxide-, hydrous, immobilized *Acetobacter* species: application of living immobilized cells to the acceleration of the continuous conversions of ethanol (wort) to acetic acid (vinegar), 209
Trichoderma reesei, a high cellulase-producing mutant strain of, 59
Trichoderma reesei, cellulase of, shear inactivation of, 239
Tube culture of microorganisms, an automated recording incubator for, 194
Tyrosine, formation of, from glycine, formaldehyde and phenol under the action of a partially purified preparation of tyrosine phenol lyase: the participation of a different enzyme, 305
Tyrosine phenol lyase: formation of tyrosine from glycine, formaldehyde and phenol under the action of a partially purified preparation of, the participation of a different enzyme, 305

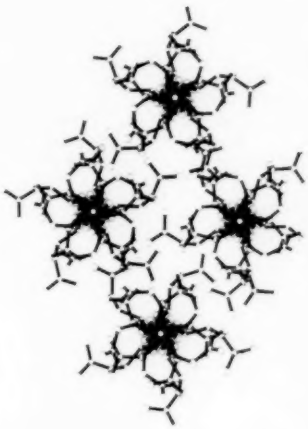
Ultrafiltration of raw sewage using an immobilized enzyme membrane, 145

Whole-cell glucose isomerase from *Streptomyces* spp., immobilized, characteristics of. Studies on microbial glucose isomerase: 4., 227
Whole cells, immobilized, amperometric determination of total assimilable sugars in fermentation broths with use of, 234

Yeast cells, gel-entrapped, continuous inversion of sucrose by, 217

International Journal of **Biological Macromolecules**

Structure, function and interactions



INTERNATIONAL JOURNAL OF BIOLOGICAL MACROMOLECULES helps to focus the different approaches to the study of biological macromolecules at the molecular level.

Topics covered emanate from the following disciplines:

- Biophysics
- Biochemistry
- Physical Chemistry
- Bio-organic chemistry
- Molecular biology
- Biomedical science

The journal publishes studies on all biological macromolecules, e.g. proteins, nucleic acids, polysaccharides and their synthetic analogues. It covers studies on the association of biological macromolecules e.g. viruses, nucleosomes, membranes and glycoproteins. Studies on biomaterials, that is, natural materials comprising biological macromolecules, e.g. chromatin, muscle, skin and tendon, are also covered.
